# THE PROBLEM

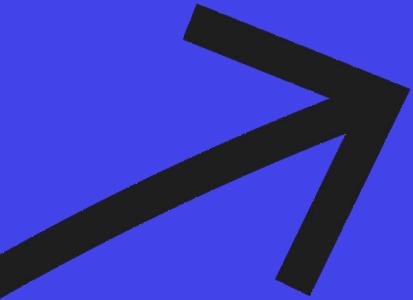

# THERE IS NO CENTRALIZED SOURCE TO FIND GREEN MATERIALS

- The sustainable wave is relatively new.
- Designers that want to hop on board have to perform **extensive web searches for alternative fabrics.**
- Also having to **slowly check their contacts for reclaimed and leftover materials**, in order to reuse them and prevent them from going to landfill.

# THE SOLUTION

- Greenlist aims to be a **registry for designers** that want to become eco-friendly.
- With our registry, **designers can find companies who sell sustainable materials** as well as vendors who are trying to get rid of reclaimed materials.
- We are trying to take away creators' headaches of finding fashion-sustainable suppliers by making all this **information much easier to find.**

# Future Implementations

# Future Implementations

1. **Request feature** in Reclaimed Section
2. **Subscription gate** with the income going **towards helping small designers / businesses go green**
3. Add **Supplier portal** requiring certification by the GOTS (Global Organic Textile Standard), plus **private messaging** to **promote community**
4. **Materials Research** Section: Enable designers to **compare different materials** against each other
